\*Note: Statistics solely refer to volumes traded via transparent market platforms with a price reference and some kind of product standardisation; OTC refers to physically settled volumes traded among parties via brokers - with either the parties managing credit risk or trading being cleared by the broker - and exchange execution denotes those volumes supervised and cleared by an organised central market operator. In some markets, sizeable volumes are traded, although not on transparent market platforms. These bilateral deals or swaps can also lack a price reference (e.g. Spain, 434 TWh in 2016 while 22 TWh in OTC and 7 TWh in Exchange)

Figure 10, Page 27: Breakdown of traded volumes per product at EU hubs -2016 (TWh/year)
